Leveled Literacy Intervention (LLI)
Reading Progress for LLI students in the Bristol Public Schools, Bristol, CT
2009-2010

Introduction

The following report describes reading gains for students enrolled in the Leveled Literacy Intervention (LLI) program in the Bristol Public Schools in Bristol, Connecticut which is located in the northeast region of the United States.

Data were collected from 11 teachers who agreed to submit individual data forms for their students who participated in LLI during the 2009-2010 school year. The 202 students were from 10 different schools in the district. The completed data forms were sent to the author of this report either by the individual LLI teachers or by a district level contact.

What Is Leveled Literacy Intervention?

LLI is a short-term, small-group, supplementary intervention developed by Irene Fountas and Gay Su Pinnell. LLI is designed to serve struggling readers in grades K-2, although some school districts may use the intervention with older students. LLI is built around the text reading gradient designed by Fountas and Pinnell; this system designates leveled texts from A (the easiest texts) to Z (the most difficult).

LLI is described as a system because it includes reading, writing, and word study, each used together and systematically across increasingly difficult levels of texts. Three LLI systems currently exist:

- Orange, recommended for Kindergarten, levels A to C;
- Green, recommended for Grade 1, levels A to J; and
- Blue, recommended for Grade 2, levels C to N.

The K-2 LLI systems are designed to provide 14 to 20 weeks of daily, intensive extra reading lessons (beyond classroom service) that result in accelerated progress with flexible decision making about student entry and exit. Students enrolled in LLI participate in daily (five times per week), 30-minute literacy lessons taught by an LLI trained teacher. The recommended group size is three students at a time with one teacher to allow for close observation and differentiated response to student strengths and needs. Because of restrictions or limited resources, some school districts may alter these requirements but the goal of 1:3 and 5 lessons per week is highly recommended for the strongest outcomes.

The objective of LLI is to help students reduce the gap between their current instructional reading level and their expected instructional reading level.

The intended term of the intervention ranges from about 14 to 18 weeks after which time the students are released if approximate grade level expectations are met. At the end of this time period, students who have made progress but do not yet meet expected instructional reading levels for grade and time are re-evaluated. The evaluation may suggest more time in LLI lessons or an alternative intervention (such as individual tutoring). Students who have not received a full program of services and are in the intervention
at the end of the school year may continue to receive service at the beginning of the next school year. Some students who are taken in to the intervention may have achievement levels more than a year below grade level. Though grade level performance may not be achieved in the short term, if resources allow for service to continue, steady progress may warrant longer term service.

**LLI Teachers**

Data were voluntarily reported on 202 LLI students taught by 11 LLI teachers in 10 schools. The LLI teachers served the role of literacy instructional support or reading teacher in their schools. The LLI systems were new to many of these teachers. Within the LLI Systems, lesson guides, professional development tutorials and DVD examples of lessons are provided. All of the LLI teachers who reported the source of their LLI training were trained in their district. The teachers received 9.6 hours or approximately one and a half days, on average, of LLI training (range: 6-10, SD = 1.3). In addition, 36.4% of the teachers were trained in Reading Recovery, an individual tutoring approach that offers intensive literacy intervention for first graders (see whatworksclearinghouse.com).

**Student Characteristics**

Data were submitted for 202 students. The majority of the Bristol LLI students were in first grade; one student was reportedly in second grade. Of the total group, 55.4% were male and 43.6% were female, and more than half of the students were White. As an indication of students’ economic status, information on free/reduced lunch was collected and 60.4% fell into this category. Refer to Table 1 for a summary of the student demographics.

**Results – Reading Progress**

Below is a summary of the reading progress of 202 students who received LLI during the 2009/2010 school year in the Bristol Public Schools. Of the total group, nine of the LLI students did not complete the full set of sessions offered to them because they moved or refused the intervention, and thus, their data were eliminated from the analyses reported below. Furthermore, some of the data submitted by the LLI teachers contained missing or incomplete information. The reported results below also exclude cases with missing data.

**LLI Groups and Student Attendance**

LLI was designed to be delivered in a group of three students with one teacher, five days per week; however, the delivery of LLI in the Bristol Public Schools varied somewhat. Overall, each of the LLI groups was comprised of between two and four students ($M = 2.9$, $SD = .4$) and the groups met between four and five days a week ($M = 4.6$, $SD=.5$) for 30 minutes per session (see Table 3). Additionally, all of the LLI
students received additional small group reading instruction in their classrooms (range: 4-5, $M = 4.9$ lessons per week, $SD = .3$).

The LLI students who completed the full set of LLI sessions offered to them and for whom attendance information was available received LLI for an average of 24.2 weeks (range: 5-36, $SD = 8.6$) and they attended an average of 86.7 LLI lessons (range: 20-163, $SD = 36.2$) (see Table 3). It should be noted, however, that some students were not able to receive the full intervention as the school year ended and their LLI teachers indicated that they would receive more LLI the following year.

Reading Progress

The data were collected and reported for LLI students only. No control group was identified and assessed and therefore, the Bristol Public Schools LLI student growth was compared to Fountas and Pinnell grade level criteria (see Table 2) to assess the group’s progress. Each student’s reading gain was determined by looking at their pre- and post- LLI instructional reading levels (ranging from Pre-A to Z) which are based on the Fountas and Pinnell leveled text system.

- Obtaining Fountas and Pinnell Instructional Reading Levels
  The F&P instructional reading levels were obtained through the teachers’ reports of their students’ instructional reading levels which were determined by administration of the Fountas and Pinnell Benchmark Assessment System or by the conversion to F&P levels of the teacher’s reports of their students’ score on other assessments including the DRA or DRA2.

- Conversion to Time Equivalent (TE) Score
  Once each child’s instructional level at entry and exit was obtained, the levels were converted to a Time Equivalent (TE) score which represents the number of months of school a typically progressing student is expected to have completed when they demonstrate the reading behaviors associated with each level according to Fountas and Pinnell guidelines. The TE scores represent the number of months the student was in school and are based on a ten month school year because children are not in school for two months of each year. If an instructional reading level is expected over more than one month, the TE score reflects the middle point of the expected band of time that the particular level is expected (see Table 2). For example, level C is expected at months eight, nine, and ten during Kindergarten and the time equivalent for level C is month nine.

- Calculating Reading Gain
  The difference between the entry and exit TE score reflects the gain (number of months of progress) the student made between entry and exit from LLI. For example, a student who enters LLI at level A and exits at level C has progressed from what is expected in the fourth month of Kindergarten to what is expected in the ninth month of Kindergarten and thus, the student’s reading gain is five months.

Table 2. Fountas and Pinnell Instructional Level Expectations for Reading and Time Equivalent Scores (months) for each Level.

Overall, the LLI students progressed an average of 9.0 months ($n = 134$, $SD = 4.7$) from entry until exit from LLI. This growth was achieved during participation in LLI for an average of 24.2 weeks. It should be noted that while the LLI teachers strived to provide all scheduled LLI lessons each week, vacation and absentee days often made this impossible. In spite of this, the LLI students progressed an average of nine months in a little more than six months; as a group they moved forward at an accelerated pace when compared to typical reading progress over time according to Fountas and Pinnell guidelines (see Table 3).

Table 3. Average Number of Students in Group, Average Number of Weeks of LLI, Average Number of LLI Lessons per Week, Average Number of LLI Lessons, and Average Student Growth in Months.

The instructional reading level gain for the LLI students is depicted in Chart 2 below. 77.6% of the LLI students demonstrated an instructional reading level at least three levels higher than their pre-LLI level and 18.7% raised their reading skills seven or more levels, which in all grades represents more than a year’s progress (see Chart 1).
Grade Level Attainment

The percentage of students who were below grade level or at or above grade level at entry and exit from LLI, as determined by Fountas and Pinnell guidelines, is depicted below (see Table 2 and Chart 3). Overall, 69.8% were at or within two text reading levels of their expected instructional reading level when their LLI instruction ended (see Table 2 and Chart 2). These results indicate accelerated progress even if students only closely approached expected grade level reading.
Key Findings

- On average, the Bristol Public Schools LLI students demonstrated reading progress over the span of time they participated in the intervention which is comparable to expected reading progress over 9.0 months during the school year. This progress was achieved during participation in LLI for an average of 24.2 weeks or a little more than six months.

- Post-LLI, 77.6% of the LLI students demonstrated an instructional reading level at least three levels higher than their pre-LLI level and 18.7% raised their reading skills seven or more levels.

- Post-LLI, 69.8% of the LLI students were at or within two text reading levels of grade level expectation.

Conclusions

Results of this evaluation indicate as a group, the 202 Bristol Public Schools struggling readers who received Leveled Literacy Intervention supplementary instruction in Bristol, CT demonstrated accelerated progress over the period they received LLI. In addition, only a very small percentage demonstrated no growth and more than three quarters of the students made significant progress. Furthermore, post-LLI, more than half of the LLI students were at or within two text reading levels of their grade level expectation according to the Fountas and Pinnell guidelines.
