Introduction

The following report describes reading gains for students enrolled in the Leveled Literacy Intervention (LLI) program during the 2009-2010 school year in a school district located in the southeast region of the United States. Data were collected from 10 teachers who agreed to submit individual data forms for their students who participated in LLI during the 2009-2010 school year. The 39 students were from 10 different schools in the district. The completed data forms were sent to the author of this report either by the individual LLI teachers or by a district level contact.

What Is Leveled Literacy Intervention?

LLI is a short-term, small-group, supplementary intervention developed by Irene Fountas and Gay Su Pinnell. LLI is designed to serve struggling readers in grades K-2, although some school districts may use the intervention with older students. LLI is built around the text reading gradient designed by Fountas and Pinnell; this system designates leveled texts from A (the easiest texts) to Z (the most difficult).

LLI is described as a system because it includes reading, writing, and word study, each used together and systematically across increasingly difficult levels of texts. Three LLI systems currently exist:

- Orange, recommended for Kindergarten, levels A to C;
- Green, recommended for Grade 1, levels A to J; and
- Blue, recommended for Grade 2, levels C to N.

The K-2 LLI systems are designed to provide 14 to 20 weeks of daily, intensive extra reading lessons (beyond classroom service) that result in accelerated progress with flexible decision making about student entry and exit. Students enrolled in LLI participate in daily (five times per week), 30-minute literacy lessons taught by an LLI trained teacher. The recommended group size is three students at a time with one teacher to allow for close observation and differentiated response to student strengths and needs. Because of restrictions or limited resources, some school districts may alter these requirements but the goal of 1:3 and 5 lessons per week is highly recommended for the strongest outcomes.

The objective of LLI is to help students reduce the gap between their current instructional reading level and their expected instructional reading level.

The intended term of the intervention ranges from about 14 to 18 weeks after which time the students are released if approximate grade level expectations are met. At the end of this time period, students who have made progress but do not yet meet expected instructional reading levels for grade and time are re-evaluated. The evaluation may suggest more time in LLI lessons or an alternative intervention (such as individual tutoring). Students who have not received a full program of services and are in the intervention at the end of the school year may continue to receive service at the beginning of the next school year. Some students who are taken in to the intervention may have achievement levels more than a year below
grade level. Though grade level performance may not be achieved in the short term, if resources allow for service to continue, steady progress may warrant longer term service.

**LLI Teachers**

Data were voluntarily reported on 39 LLI students taught by 10 LLI teachers who all reported serving the role of reading teacher at 10 schools. The LLI systems were new to some of these teachers. Within the LLI Systems, lesson guides, professional development tutorials and DVD examples of lessons are provided. Most of the LLI teachers received their LLI training through Heinemann; two teachers were trained by Lesley University (see Table 1).

Table 1. Source of LLI Teacher Training.

The teachers received 34.4 hours or approximately four days, on average, of LLI training (range: 8-80, SD = 15.4). In addition, 80% of the teachers were trained in Reading Recovery, an individual tutoring approach that offers intensive literacy intervention for first graders (see whatworks clearinghouse.com).

**Student Characteristics**

Data were submitted for 39 first grade students. Of the total group, 66.7% were male and 33.3% were female, 89.7% were White, 5.1% were Hispanic, and 5.1% were Black. In addition, 15.4% of the children were English Language Learners. Refer to Table 2 for a summary of the student demographics.

Of the total group of LLI students, one had an IEP for speech and language support services.

**Results – Reading Progress**

Below is a summary of the reading progress of 39 students who received LLI during the 2009-2010 school year. Some of the data submitted by the LLI teachers contained missing or incomplete information. The reported results below exclude cases with missing data.
LLI Groups and Student Attendance

LLI was designed to be delivered in a group of three students with one teacher, five days per week; however, the delivery of LLI in this school district located in the southeast region of the United States varied somewhat. Overall, each of the LLI groups was comprised of between two and four students ($M = 3.6$, $SD = .6$) and the groups met five days a week for 30 minutes per session (see Table 4). Additionally, all of the LLI students received additional small group reading instruction in their classrooms ($range: 3-5$, $M = 4.4$ lessons per week, $SD = .9$). The LLI students received LLI for an average of 13.4 weeks ($range: 6-18$, $SD = 3.0$) and they attended an average of 60.1 LLI lessons ($range: 27-72$, $SD = 14.0$) (see Table 4).

Reading Progress

The data were collected and reported for LLI students only. No control group was identified and assessed and therefore, the LLI student growth was compared to Fountas and Pinnell grade level criteria (see Table 4) to assess the group’s progress. Each student’s reading progress was determined by looking at their pre- and post- LLI instructional reading levels (ranging from Pre-A to Z) which are based on the Fountas and Pinnell leveled text system.

- **Obtaining Fountas and Pinnell Instructional Reading Levels**
  The F&P instructional reading levels were obtained through the teachers’ reports of their students’ instructional reading levels which were determined by administration of the Fountas and Pinnell Benchmark Assessment System.

- **Conversion to Time Equivalent (TE) Score**
  Once each child’s instructional level at entry and exit was obtained, the levels were converted to a Time Equivalent (TE) score which represents the number of months of school a typically progressing student is expected to have completed when they demonstrate the reading behaviors associated with each level according to Fountas and Pinnell guidelines. The TE scores represent the number of months the student was in school and are based on a ten month school year because children are not in school for two months of each year. If an instructional reading level is expected over more than one month, the TE score reflects the middle point of the expected band of time that the particular level is expected (see Table 3). For example, level C is expected at months eight, nine, and ten during Kindergarten and the time equivalent for level C is month nine.

- **Calculating Reading Gain**
  The difference between the entry and exit TE score reflects the gain (number of months of progress) the student made between entry and exit from LLI. For example, a student who enters LLI at level A and exits at level C has progressed from what is expected in the fourth month of Kindergarten to what is expected in the ninth month of Kindergarten and thus, the student’s reading gain is five months.

Overall, the LLI students progressed an average of 7.7 months (n = 39, SD = 1.9) from entry until exit from LLI. This growth was achieved during participation in LLI for an average of 13.4 weeks or just under three and a half months. The LLI students moved forward at an accelerated pace when compared to typical reading progress over time according to Fountas and Pinnell guidelines (see Table 4).

Table 4. Average Number of Students in Group, Average Number of Weeks of LLI, Average Number of LLI Lessons per Week, Average Number of LLI Lessons, and Average Student Growth in Months by Grade.

The instructional reading level gain for the LLI students is depicted in Chart 1 below. All of the students made some progress and 92.3% of the LLI students demonstrated an instructional reading level at least three levels higher than their pre-LLI level (see Chart 1).
Grade Level Attainment

The percentage of students who were below grade level or at or above grade level at entry and exit from LLI, as determined by Fountas and Pinnell guidelines, is depicted below (see Table 3 and Chart 2). Overall, 71.8% were at or within one text reading level of their expected instructional reading level when their LLI instruction ended (see Table 3 and Chart 2) and all of the students were at or within two text reading levels of grade level expectation.

Chart 2. Instructional Reading Level at Entry (n=39) and Exit (n=39).

Key Findings

- On average, the LLI students demonstrated reading progress over the span of time they participated in the intervention which is comparable to expected reading progress over 7.7 months during the school year. This progress was achieved during the students’ participation in LLI for an average of 13.4 weeks or a little less than three and a half months.

- Post-LLI, 92.3% of the LLI students demonstrated an instructional reading level at least three levels higher than their pre-LLI levels.

- Post-LLI, 71.8% of the LLI students were within one text reading level of grade level expectation according to Fountas and Pinnell guidelines.

Conclusions

Results of this evaluation indicate that as a group, the 39 struggling readers who received Leveled Literacy Intervention supplementary instruction at a school district located in the southeast region of the United States demonstrated accelerated progress over the period they received LLI (Fountas and Pinnell 10 month guidelines). In addition, all of the students made some growth and more than three quarters of the students made significant reading progress. Furthermore, post-LLI, almost three quarters of the LLI students were within one text reading level of their grade level expectation according to the Fountas and Pinnell guidelines (see Table 4).
