Leveled Literacy Intervention (LLI)
Reading Progress for LLI students at the
Imagine Rosefield Elementary School in Surprise, Arizona
2009-2010

Introduction

The following report describes reading gains for students enrolled in the Leveled Literacy Intervention (LLI) program during the 2009-2010 school year at the Imagine Rosefield Elementary School. Imagine Rosefield is a charter school in Surprise, Arizona which serves a suburban community located in the southwest region of the United States. One teacher at the Imagine Rosefield Elementary School agreed to submit individual data forms for her 43 students who participated in LLI during the 2009-2010 school year.

What Is Leveled Literacy Intervention?

LLI is a short-term, small-group, supplementary intervention developed by Irene Fountas and Gay Su Pinnell. LLI is designed to serve struggling readers in grades K-2, although some school districts may use the intervention with older students (see Table 1). LLI is built around the text reading gradient designed by Fountas and Pinnell; this system designates leveled texts from A (the easiest texts) to Z (the most difficult).

LLI is described as a system because it includes reading, writing, and word study, each used together and systematically across increasingly difficult levels of texts. Three LLI systems currently exist:

- Orange, recommended for Kindergarten, levels A to C;
- Green, recommended for Grade 1, levels A to J; and
- Blue, recommended for Grade 2, levels C to N.

The K-2 LLI systems are designed to provide 14 to 20 weeks of daily, intensive extra reading lessons (beyond classroom service) that result in accelerated progress with flexible decision making about student entry and exit. Students enrolled in LLI participate in daily (five times per week), 30-minute literacy lessons taught by an LLI trained teacher. The recommended group size is three students at a time with one teacher to allow for close observation and differentiated response to student strengths and needs. Because of restrictions or limited resources, some school districts may alter these requirements but the goal of 1:3 and 5 lessons per week is highly recommended for the strongest outcomes.

The objective of LLI is to help students reduce the gap between their current instructional reading level and their expected instructional reading level.

The intended term of the intervention ranges from about 14 to 18 weeks after which time the students are released if approximate grade level expectations are met. At the end of this time period, students who have made progress but do not yet meet expected instructional reading levels for grade and time are re-evaluated. The evaluation may suggest more time in LLI lessons or an alternative intervention (such as individual tutoring). Students who have not received a full program of services and are in the intervention at the end of the school year may continue to receive service at the beginning of the next school year. Some students who are taken in to the intervention may have achievement levels more than a year below
grade level. Though grade level performance may not be achieved in the short term, if resources allow for service to continue, steady progress may warrant longer term service.

**LLI Teacher**

Data were voluntarily reported on 43 LLI students taught by one reading specialist at the Imagine Rosefield Elementary School. Within the LLI Systems, lesson guides, professional development tutorials and DVD examples of lessons are provided. The Imagine Rosefield Elementary School LLI teacher received 40 hours of LLI training and she was trained by Heinemann.

**Student Characteristics**

Data were submitted for 43 first through fourth grade students. Of the total group, 74.4% were male and 23.3% were female, 69.8% were White, 11.6% were Hispanic, 11.6% were Black, and 4.7% were Asian/Pacific Island. As an indication of students’ economic status, information on free/reduced lunch was collected and 30.2% fell into this category. In addition, 23.3% of the children were English Language Learners. Refer to Table 1 for a summary of the LLI student sample size by grade and refer to Table 2 for a summary of the student demographics.

Of the total group of LLI students, one had an individualized education plans that mandated that s/he receive support for Reading.

**Results – Reading Progress**

Below is a summary of the reading progress of 43 students who received LLI during the 2009/2010 school year. Some of the data submitted by the LLI teachers contained missing or incomplete information. The reported results below exclude cases with missing data.

**LLI Groups and Student Attendance**

LLI was designed to be delivered in a group of three students with one teacher, five days per week; however, the delivery of LLI at the Imagine Rosefield Elementary School varied slightly. Overall, each of the
LLI groups was comprised of between one and five students \((M = 3.7, SD = .9)\) and the groups met five days a week for 30 minutes per session (see Table 4). Additionally, 79.1% of the LLI students received additional small group reading instruction, three times per week, in their classrooms.

The LLI students who completed the full set of LLI sessions offered to them and for whom attendance information was available received LLI for an average of 14.1 weeks \((\text{range: } 6-24, \ SD = 5.5)\) and they attended an average of 65.5 LLI lessons \((\text{range: } 25-120, \ SD = 26.8)\) (see Table 4).

**Reading Progress**

The data were collected and reported for LLI students only. No control group was identified and assessed and therefore, the Imagine Rosefield Elementary School LI student growth was compared to Fountas and Pinnell grade level criteria (see Table 3) to assess the group's progress. Each student's reading gain was determined by looking at their pre- and post- LLI instructional reading levels (ranging from Pre-A to Z) which are based on the Fountas and Pinnell leveled text system.

- **Obtaining Fountas and Pinnell Instructional Reading Levels**
  
  The F&P instructional reading levels were obtained through the teachers’ reports of their students' instructional reading levels which were determined by administration of the Fountas and Pinnell Benchmark Assessment System.

- **Conversion to Time Equivalent (TE) Score**
  
  Once each child's instructional level at entry and exit was obtained, the levels were converted to a Time Equivalent (TE) score which represents the number of months of school a typically progressing student is expected to have completed when they demonstrate the reading behaviors associated with each level according to Fountas and Pinnell guidelines. The TE scores represent the number of months the student was in school and are based on a ten month school year because children are not in school for two months of each year. If an instructional reading level is expected over more than one month, the TE score reflects the middle point of the expected band of time that the particular level is expected (see Table 3). For example, level C is expected at months eight, nine, and ten during Kindergarten and the time equivalent for level C is month nine.

- **Calculating Reading Gain**
  
  The difference between the entry and exit TE score reflects the gain (number of months of progress) the student made between entry and exit from LLI. For example, a student who enters LLI at level A and exits at level C has progressed from what is expected in the fourth month of Kindergarten to what is expected in the ninth month of Kindergarten and thus, the student’s reading gain is five months.
Overall, the LLI students progressed an average of 10.9 months \( (n = 33, SD = 5.6) \) from entry until exit from LLI. This growth was achieved during participation in LLI for an average of 14.1 weeks. The LLI students progressed an average of almost eleven months in a little more than three and a half months. At all grade levels, the LLI students moved forward at an accelerated pace when compared to typical reading progress over time according to Fountas and Pinnell guidelines (see Table 4 and Chart 1 below).

</table>

Table 4. Average Number of Students in Group, Average Number of Weeks of LLI, Average Number of LLI Lessons per Week, Average Number of LLI Lessons, and Average Student Growth in Months by Grade.
The instructional reading level gain for the LLI students is depicted in Chart 2 below. 87.8% of the LLI students demonstrated an instructional reading level at least three levels higher than their pre-LLI level and 24.2% raised their reading skills seven or more levels, which in all grades represents more than a year’s progress (see Chart 2).

The results reported for the Imagine Rosefield Elementary School LLI students are positive given the variation in the grade level of students and the degree to which they were reading below grade level. All students demonstrated some growth and 87.8% made significant progress.

**Grade Level Attainment**

The percentage of students who were below grade level or at or above grade level at entry and exit from LLI, as determined by Fountas and Pinnell guidelines, is depicted below (see Table 3 and Chart 3). Overall, 69.7% were at or within one text reading level of their expected instructional reading level when their LLI instruction ended (see Table 3 and Chart 3); and 81.8% were at or within two text reading levels of grade level expectation. These results indicate accelerated progress even if students only closely approached expected grade level reading.
Key Findings

- On average, the Imagine Rosefield Elementary School LLI students demonstrated reading progress over the span of time they participated in the intervention which is comparable to expected reading progress over 10.9 months during the school year. This progress was achieved during the students’ participation in LLI for an average of 14.1 weeks or just over three and a half months.

- Post-LLI, 87.8% of the LLI students demonstrated an instructional reading level at least three levels higher than their pre-LLI levels.

- Post-LLI, 69.7% of the LLI students were within one text reading level of grade level expectation according to Fountas and Pinnell guidelines.

Conclusions

Results of this evaluation indicate that as a group, the 43 Imagine Rosefield Elementary School struggling readers who received Leveled Literacy Intervention supplementary instruction in Surprise, Arizona demonstrated accelerated progress over the period they received LLI; on average the LLI students made more than twice the amount of reading progress when compared to typical reading progress over time (Fountas and Pinnell 10 month guidelines). In addition, all students made some growth and more than three quarters of the students made significant reading progress. Furthermore, post-LLI, more than half of the LLI students were within one text reading level of their grade level expectation according to the Fountas and Pinnell guidelines (see Table 4).
